Technical Specifications:

• Input voltage: 6-18V

Output voltage: 3-15V

Max output current: 1.5A

• Dimensions: 63(L) x 24(Dia.) mm

Instructions:

- Connect the module according to the wiring diagram.
 Incorrect wiring will damage the module, and may short-circuit your devices if you connect it in the incorrect polarity.
- Adjust the output voltage with jumpers.
- Mount the module in a well-ventilated place, as the unit will heat up depending on the load. Ensure to mount it in a place where the heating up of the module, up to 50°C, will not have any negative effect on its surroundings.
- If the module gets too hot during use, or the current is overloaded, it will switch off automatically.

Notes:

- The input voltage must be larger than the required output voltage.
- Never get any part of the module wet.
- Never attempt to open, modify or repair any part of the module.
