

# USB Keystroke Pranker

Unleash moments of confusion and panic on unsuspecting victims with what appears to be a USB drive. Simply plug it into their computer and it will either randomly type sentences, engage capslock or move the mouse on their PC. Little switches allow you to control the prank option and a dial will adjust the time delay. It's advisable to keep the frequency low to avoid suspicion.

**USB 2.0  
DRIVE**

## Operation:

**1** Turn the dial left or right to set the time delay from 5sec-15mins

**2** Switch the "Caps lock" button to the right to turn it on, the timing will depend on the time delay setting.

**3** Switch the "Keyboard" button to the right to turn it on, it will start randomly typing preset sentences depending on the time delay setting.

**4** Switch the "Mouse" button to the right to make the mouse randomly move depending on the time delay setting.

### Please Note:

. You can select any combination of prank buttons, even all three at once.

### Important Information:

- . This product can work on any operating system however some Linux operating systems may not work depending on configuration.
- . Caps lock toggling may not work on Mac® computers.
