

Caravan Power Adaptor & Portable RCD

Operating Instructions

This RCD should be tested before every use and at least once per month. To test:

- Uncoil the lead fully and plug directly into a power point and switch on the power point
- Open the clear plastic flap over the safety switch, ensure the black switch is in the ON position, and press the black test button marked with the letter "T"
- The safety switch should activate and the black switch should trip into the OFF position
- If the safety switch does not trip when the test button is pushed, the unit should not be used and should be returned to the place of purchase for test and repair

Ensure that the unit is stored safely at all times and not subject to abuse such as immersion in liquids or dropping.

Electricity can be dangerous! Portable safety switches like this product are not a substitute for basic electric safety precautions. Portable safety switches are additional protection and will not prevent electric shock, but will minimise the effect. Portable safety switches will trip for a fault between the body and earth, but not against active to neutral faults.

Equipment should be unplugged from the device before any inspection or repair of that equipment is attempted.

You must seek advice from an authorised electrical contractor or Electus Distribution head office (details below) if the unit repeatedly trips or fails to trip when tested in accordance with the instructions.

This portable safety switch must be connected directly to a power outlet using the cord fitted to the product. Do not use this device with an extension cord to connect to a power outlet.

Do not use this device in the rain.

Specifications

Model: MS4044

Voltage: 240VAC 50Hz

Max Load: 2400W 10A Max.

Rated residual current: 30mA

**TEST BEFORE USE. DO NOT USE IF TEST FAILS
DO NOT OPERATE UNLESS THE CORD IS FULLY UNCOILED**
