

DIY Game Console

Compatible with Arduboy Games

About the Kit

The maycar DIY game console is an Arduino-based 8-bit handheld game console that you can use to create your very own games or enjoy the creations of others via the Arduboy™ community.

Components List

- 1 x Console Circuit Board
- 6 x White/Blue caps
- 4 x M2*6mm round-headed screws
- 4 x M2*10mm round-headed screws
- 4 x M2.0*11mm dual-pass copper pillars
- 4 x White insulating column ABS
- 1 x 3*83mm black screw driver
- 1 x Arduino game console acrylic case
- 1 x USB cable

Installation

1. Take out all the parts and lay them out on your desk.

2. Fix the board and acrylic top board together with 4 M2*10mm round-head screws, 4 white insulating columns, and 4 M2.0*11mm dual-pass copper pillars.

3. Install 6 button caps

4. Fix the bottom acrylic board and the 4 M2.0*11mm dual-pass copper pillars together with 4 M2*6mm round-head screws.

Please Note: The holes of acrylic bottom board should be aligned with the potentiometer on the console when installing it.
