**description**

These devices contain six independent inverters. The open-collector outputs require pull-up resistors to perform correctly. They may be connected to other open-collector outputs to implement active-low wired-OR or active-high wired-AND functions. Open-collector devices are often used to generate high  $V_{OH}$  levels.

The SN5405, SN54LS05, and SN54S05 are characterized for operation over the full military temperature range of  $-55^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ . The SN7405, SN74LS05, and SN74S05 are characterized for operation from  $0^{\circ}\text{C}$  to  $70^{\circ}\text{C}$ .
